

Macchi M67 for the Virtual Schneider Project

The file VSP_M67.exe in this Zip archive will install the Macchi M67 into your Flight Simulator folders automatically. Simply unzip the file into a temporary folder and double-click to run the program. During the installation setup process you will be prompted for the location of the Flight Simulator 9 folder on your system, by default it is set for the standard Microsoft installation route but this can be changed. Two new folders will be created for the aircraft installation, these are named Macchi M67-7 and Macchi m67-10. Project documentation is in the Macchi M67-7 folder.

NOTE . This aircraft requires gauges and sound files that are part of the Supermarine Rolls-Royce S6 installation. These files are available as VSP29_2.zip

Please read the document files that are included in the installation, these give additional information regarding the VSP project and also the files you have just installed.

When you run Flight Simulator the VSP aircraft can be found listed together under 'Schneider 1929' in the Flight Simulator aircraft selection window.

The aircraft are configured to use additional third-party freeware add-on effect files that are not included as part of this installation. These can be downloaded via the link on the Schneider download page on our website at www.transglobalaircraft.co.uk.
