

## **Macchi M52R for the Virtual Schneider Project**

The file Macchi M52R.exe in this Zip archive will install the Macchi M52R into your Flight Simulator folders automatically. Simply unzip the file into a temporary folder and double-click to run the program. During the installation setup process you will be prompted for the location of the Flight Simulator 9 folder on your system, by default it is set for the standard Microsoft installation route but this can be changed. A new folder will be created for the aircraft installation named Macchi M52-r. Project documentation is in this folder.

**NOTE . This aircraft requires gauges and sound files that are part of the Macchi M67 installation. These files are available as VSP29\_3.zip**

Please read the document files that are included in the installation, these give additional information regarding the VSP project and also the files you have just installed.

When you run Flight Simulator the VSP aircraft can be found listed together under 'Schneider 1929' in the Flight Simulator aircraft selection window.

The aircraft are configured to use additional third-party freeware add-on effect files that are not included as part of this installation. These can be downloaded via the link on the Schneider download page on our website at [www.transglobalaircraft.co.uk](http://www.transglobalaircraft.co.uk).
