

Henrik Nielsene's Arleigh Burke Class USS Bainbridge For CFS2

Converted To CFS2 by Dvslats

This package contains Henrik Nielsene's USS Bainbridge for use in CFS2.
Everything needed is included.

Installation

Create a temporary folder on your desktop and extract the contents from this zip file to it.

With that done, copy and paste the folder USS_Bainbridge to CFS2\Ships folder.

The reason for this conversion is to have a Frigate to go along with my previously uploaded Kamman Seasprite. The Bainbridge has a helicopter platform set in this package, ready for takeoff and landing.

One can easily accomplish this by creating a mission in CFS2 Mission builder. The ship is set as an aircraft carrier. With that in mind it will show in mission builder with the icon of an aircraft carrier.

**I have included one simple mission for use with my previously uploaded
kaman_sh-2g_seasprite.zip**

Animations

The radar transceivers have the rotating animation in place.
